Subject: FYI - Sampling

START will be taking split samples on 1/29 (dependent on weather) along with WV DEP and CEC (remediation contractor for Freedom Industries) from the culvert, a seep behind the secondary containment area, and 4 monitoring wells down gradient of the tank farm. I have contacted Cindy Caporale about Ft. Meade being able to run the samples (5-7 sample locations) also dependent upon how much water accumulates from the seep into a sump that CEC will be digging hopefully today, so that it settles before the sample is taken. Will be analyzing for MCHM/PPH (semi-vocs) and total VOCs with tics. To capture if we have any of the petroleum products in the samples collected from possibly the previous Pennzoil facility.

Any questions please let me know.

Thanks,

Melissa
